INDEX TO AUTHORS

A

Abelson, Philip H., and **Vogel, Henry J.** Amino acid biosynthesis in *Torulopsis utilis* and *Neurospora crassa*, 355

Anderson, E. P., Yen, C. Y., Mandel, H. George, and **Smith, Paul K.** Ureidosuccinic acid as a precursor of nucleic acid pyrimidines in normal and tumor-bearing mice, 625

Anderson, Roberta A. See *Hamilton and Anderson*, 249

Armstrong, Marvin D. The phenylalanine and tyrosine requirements of the rat, 409

— and **Shaw, Kenneth N. F.** Studies on phenylketonuria. III. The metabolism of *o*-tyrosine, 805

—, —, and **Robinson, Kathryn S.** Studies on phenylketonuria. II. The excretion of *o*-hydroxyphenylacetic acid in phenylketonuria, 797

Artom, Camillo. Effect of choline administration on the oxidation of fatty acids by extrahepatic tissues, 681

Ashmore, James. See *Renold, Hastings, Nesbett, and Ashmore*, 135

Asnis, Robert E. A glutathione reductase from *Escherichia coli*, 77

B

Baez, Silvio. See *Mazur, Baez, and Shorr*, 147

Baggett, Billy, Engel, Lewis L., and **Fielding, Linda L.** The estimation of hydroxysteroids, 87

Ball, Eric G. See *Strittmatter and Ball*, 445

Balls, A. K. See *Wood and Balls*, 297

Barnet, Harry N. See *Wick, Drury, Nakada, Barnet, and Morita*, 907

Basford, R. E. See *Huennekens, Basford, and Gabrio*, 951

Bernstein, W. See *Sinex, Plazin, Clareus, Bernstein, Van Slyke, and Chase*, 673

Black, Simon, and **Wright, Nancy G.** Aspartic β-semialdehyde dehydrogenase and aspartic β-semialdehyde, 39

— and —. β-Aspartokinase and β-aspartyl phosphate, 27

— and —. Homoserine dehydrogenase, 51

Bloch, Konrad. See *Snoke and Bloch*, 825

Bowser, Helen R. See *Magasanik and Bowser*, 571

Brand, Florence C. See *Sperry and Brand*, 69

Brown, Gene M., Ikawa, Miyoshi, and **Snell, Esmond E.** Synthesis and microbiological activity of some pantothenic acid conjugates, 855

—. See *Ward, Brown, and Snell*, 869

Brown, George Bosworth. See *Weinfeld, Roll, and Brown*, 523

Burstein, Shlomo, and **Dorfman, Ralph I.** Steroid metabolism in guinea pigs. I. Metabolism of cortisol *in vivo*, 581

—, —, and **Nadel, Eli M.** Corticosteroids in the urine of normal and scorbutic guinea pigs: isolation and quantitative determination, 597

C

Canellakis, E. S., and **Cohen, Philip P.** The end-products and intermediates of uric acid oxidation by uricase, 385

— and —. On the nature of oxonic acid and allantoxaidin as oxidation products of uric acid and allantoin, 379

—, **Tuttle, Alice L.,** and **Cohen, Philip P.** A comparative study of the end-products of uric acid oxidation by peroxidases, 397

Carter, Priscilla. See *Engel, Carter, and Fielding*, 99

Cathey, William J. See *Verly and Cathey*, 621

Cerecedo, Leopold R., and **Eich, Stephen.** Studies on thiamine analogues.

XUM

IV. Neopyrithiamine and oxyneopyrithiamine. A comparison of their effects *in vivo* and *in vitro*, 893

Chaikoff, I. L. See *Taurog, Potter, and Chaikoff*, 119

Chase, R. See *Sinex, Plazin, Clareus, Bernstein, Van Slyke, and Chase*, 673

Cheldelin, Vernon H. See *Wang, Christensen, and Cheldelin*, 365

Christensen, Bert E. See *Wang, Christensen, and Cheldelin*, 365

Clareus, D. See *Sinex, Plazin, Clareus, Bernstein, Van Slyke, and Chase*, 673

Cohen, Philip P. See *Canellakis and Cohen*, 379, 385

—. See *Canellakis, Tuttle, and Cohen*, 397

—. See *Lowenstein and Cohen*, 689

Cole, R. David, and **Li, Choh Hao.** Studies on pituitary lactogenic hormone. XIV. A simplified procedure of isolation, 197

Coon, Minor J. See *Rose, Leach, Coon, and Lambert*, 913

D

De Meio, R. H., Wizerkaniuk, Martha, and **Schreibman, I.** Enzymatic system synthesizing sulfuric acid esters of phenols, 439

Dimant, E., Landsberg, Edith, and **London, Irving M.** The metabolic behavior of reduced glutathione in human and avian erythrocytes, 769

Dixon, Jonathan S. See *Li, Geschwind, Dixon, Levy, and Harris*, 171

Dorfman, Ralph I. See *Burstein and Dorfman*, 581

—. See *Burstein, Dorfman, and Nadel*, 597

Drury, Douglas R. See *Wick, Drury, Nakada, Barnet, and Morita*, 907

E

Edelman, J., Ginsburg, V., and **Hassid, W. Z.** Conversion of monosaccharides to sucrose and cellulose in wheat seedlings, 843

Eich, Stephen. See *Cerecedo and Eich*, 893

Elwyn, David, Weissbach, Arthur, Henry, Sarah S., and **Sprinson, David B.** The biosynthesis of choline from serine and related compounds, 281

Engel, Lewis L., Carter, Priscilla, and **Fielding, Linda L.** Urinary metabolites of administered corticosterone. I. Steroids liberated by glucuronidase hydrolysis, 99

—. See *Baggett, Engel, and Fielding*, 87

Evans, Herbert M. See *Fels, Simpson, and Evans*, 311

F

Farmer, Chester J. See *Rupe and Farmer*, 899

Fels, I. Gordon, Simpson, Miriam E., and **Evans, Herbert M.** Purification of the anterior hypophyseal thyrotropic hormone, 311

Felton, S. See *Huennekens, Basford, and Gabrio*, 951

Fielding, Linda L. See *Baggett, Engel, and Fielding*, 87

—. See *Engel, Carter, and Fielding*, 99

Fish, William A. See *Stokes, Fish, and Hickey*, 325

Fishman, Rose. See *Wotiz, Richterich-van Baerle, and Lemon*, 969

G

Gabrio, Beverly Wescott. See *Huennekens, Basford, and Gabrio*, 951

Geschwind, Irving I. See *Levy, Geschwind, and Li*, 187

—. See *Li, Geschwind, Dixon, Levy, and Harris*, 171

Gilvarg, Charles. See *Yaniv and Gilvarg*, 787

Ginsburg, V. See *Edelman, Ginsburg, and Hassid*, 843

Gleason, Geoffrey I. Some notes on the exchange of iodine with thyroxine homologues, 837

Green, Maurice, and **Stahmann, Mark A.** Preparation and enzymatic hydrolysis

of poly-γ-ethylglutamyl bovine plasma albumin, 259
Greenberg, David M. See *Rabinovitz, Olson, and Greenberg*, 1

H

Hall, Leo M., and **MacVicar, Robert.** Ammonia as an intermediate in nitrate reduction by *Bacillus subtilis*, 305
Hamilton, Paul B., and **Anderson, Roberta A.** Hydroxylysine: isolation from gelatin and resolution of its diastereoisomers by ion exchange chromatography, 249
Harris, J. Ieuan, and **Li, Choh Hao.** Corticotropins (ACTH). IV. The action of carboxypeptidase on α-corticotropin, and the *C*-terminal amino acid sequence, 499
—. See *Li, Geschwind, Dixon, Levy, and Harris*, 171
Hassid, W. Z. See *Edelman, Ginsburg, and Hassid*, 843
Hastings, A. Baird. See *Renold, Hastings, Nesbett, and Ashmore*, 135
Henneman, Philip H., Rourke, G. Margaret, and **Jackson, W. P. U.** Depression of serum alkaline phosphatase activity by human serum albumin, 19
Henry, Sarah S. See *Elwyn, Weissbach, Henry, and Sprinson*, 281
Herbert, Edward, Potter, Van R., and **Takagi, Yasuyuki.** Nucleotide metabolism. IV. The phosphorylation of 5′-uridine nucleotides by cell fractions from rat liver, 923
Hickey, Frederick C. See *Stokes, Fish, and Hickey*, 325
Hofmann, Klaus, and **Tausig, Fred.** The chemical nature of the fatty acids of a group C *Streptococcus* species, 415
— and —. On the identity of phytomonic and lactobacillic acids. A reinvestigation of the fatty acid spectrum of *Agrobacterium* (*Phytomonas*) *tumefaciens*, 425
Horner, William H. See *Melville, Horner, Otken, and Ludwig*, 61
Huennekens, F. M., Basford, R. E., and **Gabrio, Beverly Wescott.** An oxidase for reduced diphosphopyridine nucleotide, 951
Huffman, Max N., and **Lott, Mary Harriet.** 16-Substituted steroids. XI. Estradiol-3,16β, 343
Humphreys, T. E., and **Stumpf, P. K.** Fat metabolism in higher plants. IV. Preparation of soluble fatty acid oxidases from peanut microsomes, 941

I

Ikawa, Miyoshi, and **O'Barr, Jean S.** The isolation of α,α′-diaminopimelic acid from *Lactobacillus arabinosus*, 877
—. See *Brown, Ikawa, and Snell*, 855

J

Jackson, W. P. U. See *Henneman, Rourke, and Jackson*, 19
Jedeikin, Lillian A., and **Weinhouse, Sidney.** Metabolism of neoplastic tissue. VI. Assay of oxidized and reduced diphosphopyridine nucleotide in normal and neoplastic tissues, 271

K

Kovachevich, R., and **Wood, W. A.** Carbohydrate metabolism by *Pseudomonas fluorescens*. III. Purification and properties of a 6-phosphogluconate dehydrase, 745
— and —. IV. Purification and properties of 2-keto-3-deoxy-6-phosphogluconate aldolase, 757

L

Lambert, G. Frederick. See *Rose, Leach, Coon, and Lambert*, 913
Landsberg, Edith. See *Dimant, Landsberg, and London*, 769
Langner, Ralph R., and **Volkmann, Carol M.** The fate of ingested acetyl-L- and D-tryptophan in the human subject, 433
Laskowski, M. See *Wu and Laskowski*, 609

Leach, Byron E. See *Rose, Leach, Coon, and Lambert,* 913
Lemon, Henry M. See *Wotiz, Richterich-van Baerle, and Lemon,* 969
Levy, Anthony L., Geschwind, Irving I., and **Li, Choh Hao.** Corticotropins (ACTH). II. Amino acid composition of α-corticotropin, 187
— and **Li, Choh Hao.** Corticotropins (ACTH). III. Kinetic studies on the reaction of *N*-terminal group reagents with α-corticotropin, and *N*-terminal group analysis, 487
—. See *Li, Geschwind, Dixon, Levy, and Harris,* 171
Levy, Hilton B. See *Webb and Levy,* 107
Li, Choh Hao, Geschwind, Irving I., Dixon, Jonathan S., Levy, Anthony L., and **Harris, J. Ieuan.** Corticotropins (ACTH). I. Isolation of α-corticotropin from sheep pituitary glands, 171
—. See *Cole and Li,* 197
—. See *Harris and Li,* 499
—. See *Levy, Geschwind, and Li,* 187
—. See *Levy and Li,* 487
Li, Yao Wen. See *Shepherd, Li, Mason, and Ziffren,* 405
Linker, Alfred, Meyer, Karl, and **Weissmann, Bernard.** Enzymatic formation of monosaccharides from hyaluronate, 237
Loewus, Frank A. See *Tchen, Loewus, and Vennesland,* 547
London, Irving M. See *Dimant, Landsberg, and London,* 769
Longenecker, J. B., and **Snell, Esmond E.** A possible mechanism for kynureninase action, 229
Lott, Mary Harriet. See *Huffman and Lott,* 343
Lowenstein, J. M., and **Cohen, Philip P.** Studies on the mechanism of carbamylaspartic acid synthesis, 689
Lowry, Oliver H. See *Strominger and Lowry,* 635
Ludwig, Martha L. See *Melville, Horner, Otken, and Ludwig,* 61

M

MacVicar, Robert. See *Hall and MacVicar,* 305
Magasanik, Boris. The metabolic control of histidine assimilation and dissimilation in *Aerobacter aerogenes,* 557
— and **Bowser, Helen R.** The degradation of histidine by *Aerobacter aerogenes,* 571
Mandel, H. George. See *Anderson, Yen, Mandel, and Smith,* 625
Mann, George V. See *Portman and Mann,* 733
Marx, Walter. See *Weiss and Marx,* 349
Mason, Edward E. See *Shepherd, Li, Mason, and Ziffren,* 405
Mazur, Abraham, Baez, Silvio, and **Shorr, Ephraim.** The mechanism of iron release from ferritin as related to its biological properties, 147
Meinhart, Josephine O., and **Simmonds, Sofia.** Serine metabolism in a mutant strain of *Escherichia coli* strain K-12, 329
Melville, Donald B., Horner, William H., Otken, Charles C., and **Ludwig, Martha L.** Studies on the origin of ergothioneine in animals, 61
Meyer, Karl. See *Linker, Meyer, and Weissmann,* 237
Morita, Toshiko N. See *Wick, Drury, Nakada, Barnet, and Morita,* 907
Morrison, Martin, and **Stotz, Elmer.** Partition chromatography of hemins. Separation of the prosthetic groups of cytochromes *a* and a_3, 373
Mortenson, L. E., and **Wilson, P. W.** Metabolism of ribose-5-phosphate by *Azotobacter vinelandii,* 713

N

Nadel, Eli M. See *Burstein, Dorfman, and Nadel,* 597
Nakada, Henry I. See *Wick, Drury, Nakada, Barnet, and Morita,* 907
Naschke, Mary Dell. See *Seaman and Naschke,* 705

Nason, Alvin. See *Zucker and Nason*, 463
Nesbett, Frances B. See *Renold, Hastings, Nesbett, and Ashmore*, 135
Nichol, Charles A. See *Zakrzewski and Nichol*, 697
Nurk, E. See *Huennekens, Basford, and Gabrio*, 951

O

O'Barr, Jean S. See *Ikawa and O'Barr*, 877
Olivard, Joanne, and **Snell, Esmond E.** Growth and enzymatic activities of vitamin B_6 analogues. I. D-Alanine synthesis, 203
— and —. II. Synthesis of miscellaneous amino acids, 215
Olson, Margaret E. See *Rabinovitz, Olson, and Greenberg*, 1
Otken, Charles C. See *Melville, Horner, Otken, and Ludwig*, 61

P

Plazin, John. See *Sinex, Plazin, Clareus, Bernstein, Van Slyke, and Chase*, 673
Portman, Oscar W., and **Mann, George V.** The disposition of taurine-S^{35} and taurocholate-S^{35} in the rat: dietary influences, 733
Potter, G. D. See *Taurog, Potter, and Chaikoff*, 119
Potter, Van R. See *Herbert, Potter, and Takagi*, 923
Poujol, Jean. See *Rivoire, Rivoire, and Poujol*, 11

R

Rabinovitz, M., Olson, Margaret E., and **Greenberg, David M.** Relation of energy processes to the incorporation of amino acids into proteins of the Ehrlich ascites carcinoma, 1
Rafelson, Max E., Jr. Conversion of radioactive glucose and acetate to tryptophan by *Aerobacter aerogenes*, 479
Renold, Albert E., Hastings, A. Baird, Nesbett, Frances B., and **Ashmore, James.** Studies on carbohydrate metabolism in rat liver slices. IV. Biochemical sequence of events after insulin administration, 135
Richterich-van Baerle, Roland. See *Wotiz, Richterich-van Baerle, and Lemon*, 969
Rivoire, Jane. See *Rivoire, Rivoire, and Poujol*, 11
Rivoire, Raymond, Rivoire, Jane, and **Poujol, Jean.** The determination of urinary 17-trioxysteroids, 11
Robinson, Kathryn S. See *Armstrong, Shaw, and Robinson*, 797
Rodkey, F. Lee. Oxidation-reduction potentials of the diphosphopyridine nucleotide system, 777
Roll, Paul M., and **Weliky, Irving.** The utilization of nucleotides by the mammal. II. N^{15}-labeled purine nucleotides, 509
—. See *Weinfeld, Roll, and Brown*, 523
Rose, William C., Leach, Byron E., Coon, Minor J., and **Lambert, G. Frederick.** The amino acid requirements of man. IX. The phenylalanine requirement, 913
Rourke, G. Margaret. See *Henneman, Rourke, and Jackson*, 19
Rupe, C. O., and **Farmer, Chester J.** Amino acid studies in the transformation of proteins of the hen's egg to tissue proteins during incubation, 899

S

Schreibman, I. See *De Meio, Wizerkaniuk, and Schreibman*, 439
Seaman, Gerald R., and **Naschke, Mary Dell.** Removal of thioctic acid from enzymes, 705
Segal, Harold L. Kinetic studies on the phenol-sulfate conjugating system of rat liver, 161
Shaw, Kenneth N. F. See *Armstrong and Shaw*, 805
—. See *Armstrong, Shaw, and Robinson*, 797

Shepherd, James A., Li, Yao Wen, Mason, Edward E., and **Ziffren, Sidney E.** The distribution of aconitase and fumarase in homogenates of human liver, 405
Sherry, Sol. See *Troll and Sherry*, 881
Shorr, Ephraim. See *Mazur, Baez, and Shorr*, 147
Shulman, N. Raphael. A proteolytic inhibitor with anticoagulant activity separated from human urine and plasma, 655
Siegelman, H. W. Quercetin glycosides of Grimes Golden apple skin, 647
Simmonds, Sofia. See *Meinhart and Simmonds*, 329
Simpson, Miriam E. See *Fels, Simpson, and Evans*, 311
Sinex, F. Marott, Plazin, John, Clareus, D., Bernstein, W., Van Slyke, Donald D., and **Chase, R.** Determination of total carbon and its radioactivity. II. Reduction of required voltage and other modifications, 673
Skogstrom, Paul R. See *Burstein and Dorfman*, 581
Smith, Paul K. See *Anderson, Yen, Mandel, and Smith*, 625
Snell, Esmond E. See *Brown, Ikawa, and Snell*, 855
—. See *Longenecker and Snell*, 229
—. See *Olivard and Snell*, 203, 215
—. See *Ward, Brown, and Snell*, 869
Snoke, John E. Isolation and properties of yeast glutathione synthetase, 813
— and **Bloch, Konrad.** Studies on the mechanism of action of glutathione synthetase, 825
Sperry, Warren M., and **Brand, Florence C.** The determination of total lipides in blood serum, 69
Sprinson, David B. See *Elwyn, Weissbach, Henry, and Sprinson*, 281
Stahmann, Mark A. See *Green and Stahmann*, 259
Stetten, DeWitt, Jr. See *Stetten and Stetten*, 723
Stetten, Marjorie R., and **Stetten, DeWitt, Jr.** Glycogen regeneration *in vivo*, 723
Stokes, William M., Fish, William A., and **Hickey, Frederick C.** The fate of injected cholestenone in the intact rat, 325
Stotz, Elmer. See *Morrison and Stotz*, 373
Strittmatter, Philipp, and **Ball, Eric G.** Formaldehyde dehydrogenase, a glutathione-dependent enzyme system, 445
Strominger, Jack L., and **Lowry, Oliver H.** The quantitative histochemistry of brain. IV. Lactic, malic, and glutamic dehydrogenases, 635
Stumpf, P. K. See *Humphreys and Stumpf*, 941

T

Takagi, Yasuyuki. See *Herbert, Potter, and Takagi*, 923
Taurog, Alvin, Potter, G. D., and **Chaikoff, I. L.** Conversion of inorganic I^{131} to organic I^{131} by cell-free preparations of thyroid tissue, 119
Tausig, Fred. See *Hofmann and Tausig*, 415, 425
Tchen, T. T., Loewus, Frank A., and **Vennesland, Birgit.** The mechanism of enzymatic carbon dioxide fixation into oxalacetate, 547
— and **Vennesland, Birgit.** Enzymatic carbon dioxide fixation into oxalacetate in wheat germ, 533
Tillotson, Arline M. See *Burstein and Dorfman*, 581
Troll, Walter, and **Sherry, Sol.** The activation of human plasminogen by streptokinase, 881
Tuttle, Alice L. See *Canellakis, Tuttle, and Cohen*, 397

V

Van Slyke, Donald D. See *Sinex, Plazin, Clareus, Bernstein, Van Slyke, and Chase*, 673
Vennesland, Birgit. See *Tchen, Loewus, and Vennesland*, 547
—. See *Tchen and Vennesland*, 533
Verly, Walter G., and **Cathey, William J.** The influence of vitamin B_{12} on

the biosynthesis of the methyl group of choline from methanol, 621
Vogel, Henry J. See *Abelson and Vogel*, 355
Volkmann, Carol M. See *Langner and Volkmann*, 433

W

Wang, Chih H., Christensen, Bert E., and **Cheldelin, Vernon H.** Conversion of pyruvic acid-2-C^{14} to some aliphatic monoamino acids in yeast, 365
Ward, G. B., Brown, Gene M., and **Snell, Esmond E.** Phosphorylation of pantothenic acid and pantethine by an enzyme from *Proteus morganii*, 869
Webb, Junius M., and **Levy, Hilton B.** A sensitive method for the determination of deoxyribonucleic acid in tissues and microorganisms, 107
Weinfeld, Herbert, Roll, Paul M., and **Brown, George Bosworth.** The utilization of nucleotides by the mammal. III. Isomeric purine nucleotides labeled with C^{14}, 523
Weinhouse, Sidney. See *Jedeikin and Weinhouse*, 271
Weiss, Samuel B., and **Marx, Walter.** The fate of radioactive cholesterol in mice with modified thyroid activities, 349
Weissbach, Arthur. See *Elwyn, Weissbach, Henry, and Sprinson*, 281
Weissman, Bernard. See *Linker, Meyer, and Weissman*, 237
Weliky, Irving. See *Roll and Weliky*, 509
Wick, Arne N., Drury, Douglas R., Nakada, Henry I., Barnet, Harry N., and **Morita, Toshiko N.** Glucosamine and the action of insulin, 907
Wilson, P. W. See *Mortenson and Wilson*, 713
Wizerkaniuk, Martha. See *De Meio, Wizerkaniuk, and Schreibman*, 439
Wood, Henry N., and **Balls, A. K.** Enzymatic oxidation of α-chymotrypsin, 297
Wood, W. A. See *Kovachevich and Wood*, 745, 757
Wotiz, Herbert H., Richterich-van Baerle, Roland, and **Lemon, Henry M.** Studies in steroid metabolism. III. Metabolism of testosterone by human serum, 969
Wright, Nancy G. See *Black and Wright*, 27, 39, 51
Wu, Feng Chi, and **Laskowski, M.** Action of the naturally occurring trypsin inhibitors against chymotrypsins α and B, 609

Y

Yaniv, Haim, and **Gilvarg, Charles.** Aromatic biosynthesis. XIV. 5-Dehydroshikimic reductase, 787
Yen, C. Y. See *Anderson, Yen, Mandel, and Smith*, 625

Z

Zakrzewski, Sigmund F., and **Nichol, Charles A.** The incorporation of formate-C^{14} into *citrovorum* factor, 697
Ziffren, Sidney E. See *Shepherd, Li, Mason, and Ziffren*, 405
Zucker, Milton, and **Nason, Alvin.** A pyridine nucleotide-hydroxylamine reductase from *Neurospora*, 463

INDEX TO SUBJECTS

A

Acetate: Oxal-. *See* Oxalacetate
Radioactive, conversion to tryptophan, *Aerobacter aerogenes, Rafelson*, 479
Acetic acid: *o*-Hydroxyphenyl-. *See* Hydroxyphenylacetic acid
Acetyl-D-tryptophan: Fate, *Langner and Volkmann*, 433
Acetyl-L-tryptophan: Fate, *Langner and Volkmann*, 433
Aconitase: Liver, *Shepherd, Li, Mason, and Ziffren*, 405
Aerobacter aerogenes: Acetate, radioactive, conversion to tryptophan, *Rafelson*, 479
Glucose, radioactive, conversion to tryptophan, *Rafelson*, 479
Histidine assimilation and dissimilation, metabolic control, *Magasanik*, 557
— degradation, *Magasanik and Bowser*, 571
Agrobacterium tumefaciens: Fatty acids, *Hofmann and Tausig*, 425
Alanine: D-, synthesis, *Olivard and Snell*, 203
Albumin: Blood serum, blood serum phosphatase, alkaline, effect, *Henneman, Rourke, and Jackson*, 19
Poly-γ-ethylglutamyl. *See* Poly-γ-ethylglutamyl albumin
Aldolase: 2-Keto-3-deoxy-6-phosphogluconate. *See* Keto-3-deoxy-6-phosphogluconate aldolase
Allantoin: Oxidation, oxonic acid and allantoxaidin relation, *Canellakis and Cohen*, 379
Allantoxaidin: Uric acid and allantoin oxidation, relation, *Canellakis and Cohen*, 379
Amino acid(s): Biosynthesis, *Neurospora crassa, Abelson and Vogel*, 355
—, *Torulopsis utilis, Abelson and Vogel*, 355
Amino acid(s)—*continued:*
α-Corticotropin, *Levy, Geschwind, and Li*, 187
Egg proteins to tissue proteins, relation, *Rupe and Farmer*, 899
Mono-. *See* Monoamino acid
Protein incorporation from, Ehrlich ascites carcinoma, energy processes, relation, *Rabinovitz, Olson, and Greenberg*, 1
Requirements, *Rose, Leach, Coon, and Lambert*, 913
Synthesis, *Olivard and Snell*, 215
Ammonia: Nitrate reduction, *Bacillus subtilis*, relation, *Hall and MacVicar*, 305
Anticoagulant: Proteolytic inhibitor, urine and blood plasma, *Shulman*, 655
Apple: Skin, quercetin glycosides, *Siegelman*, 647
Ascites: Carcinoma, Ehrlich, amino acid incorporation into protein, energy processes, relation, *Rabinovitz, Olson, and Greenberg*, 1
Aspartic acid: Carbamyl-. *See* Carbamylaspartic acid
Aspartic β-semialdehyde: *Black and Wright*, 39
Aspartic β-semialdehyde dehydrogenase: *Black and Wright*, 39
Aspartokinase: β-, *Black and Wright*, 27
Aspartyl phosphate: β-, *Black and Wright*, 27
Azotobacter vinelandii: Ribose-5-phosphate metabolism, *Mortenson and Wilson*, 713

B

Bacillus: *See also Lactobacillus*
Bacillus subtilis: Nitrate reduction, ammonia relation, *Hall and MacVicar*, 305

XUM

Bacteria: *See also Aerobacter, Agrobacterium, Azotobacter, Escherichia, Leuconostoc, Proteus, Pseudomonas, Streptococcus*
Biosynthesis: Aromatic, 5-dehydroshikimic reductase relation, *Yaniv and Gilvarg,* 787
Blood cell(s): Red, avian, glutathione, reduced, metabolism, *Dimant, Landsberg, and London,* 769
Blood plasma: Poly-γ-ethylglutamyl albumin, preparation and hydrolysis, enzymatic, *Green and Stahmann,* 259
Proteolytic inhibitor, anticoagulant properties, *Shulman,* 655
Blood serum: Albumin, blood serum phosphatase, alkaline, effect, *Henneman, Rourke, and Jackson,* 19
Lipides, total, determination, *Sperry and Brand,* 69
Phosphatase, alkaline, blood serum albumin effect, *Henneman, Rourke, and Jackson,* 19
Testosterone metabolism, effect, *Wotiz, Richterich-van Baerle, and Lemon,* 969
Brain: Glutamic dehydrogenase, determination, *Strominger and Lowry,* 635
Histochemistry, *Strominger and Lowry,* 635
Lactic dehydrogenase, determination, *Strominger and Lowry,* 635
Malic dehydrogenase, determination, *Strominger and Lowry,* 635

C

Carbamylaspartic acid: Synthesis mechanism, *Lowenstein and Cohen,* 689
Carbohydrate: Metabolism, liver, insulin effect, *Renold, Hastings, Nesbett, and Ashmore,* 135
—, *Pseudomonas fluorescens, Kovachevich and Wood,* 745, 757
Carbon: Total, determination, *Sinex, Plazin, Clareus, Bernstein, Van Slyke, and Chase,* 673
—, radioactivity, determination, *Sinex, Plazin, Clareus, Bernstein, Van Slyke, and Chase,* 673
Carbon dioxide: Fixation into oxalacetate, enzymatic, mechanism, *Tchen, Loewus, and Vennesland,* 547
— — —, —, wheat germ, *Tchen and Vennesland,* 533
Carboxypeptidase: α-Corticotropin, effect, *Harris and Li,* 499
Carcinoma: Ascites, Ehrlich, amino acid incorporation into protein, energy processes, relation, *Rabinovitz, Olson, and Greenberg,* 1
See also Neoplasm, Tumor
Cellulose: Monosaccharide conversion to, wheat seedlings, *Edelman, Ginsburg, and Hassid,* 843
Cholestenone: Fate, *Stokes, Fish, and Hickey,* 325
Cholesterol: Radioactive, fate, thyroid effect, *Weiss and Marx,* 349
Choline: Biosynthesis from serine, *Elwyn, Weissbach, Henry, and Sprinson,* 281
Fatty acid oxidation, effect, *Artom,* 681
Methyl group biosynthesis from methanol, vitamin B_{12} effect, *Verly and Cathey,* 621
Chymotrypsin(s): α-, oxidation, enzymatic, *Wood and Balls,* 297
α, trypsin inhibitors, action, *Wu and Laskowski,* 609
B, trypsin inhibitors, action, *Wu and Laskowski,* 609
Citrovorum factor: *See Leuconostoc citrovorum*
Coagulation: *See also* Anticoagulant
Corticosteroid(s): Urine, isolation and determination, scurvy, *Burstein, Dorfman, and Nadel,* 597
Corticosterone: Metabolites, urine, *Engel, Carter, and Fielding,* 99
Corticotropin(s): *Li, Geschwind, Dixon, Levy, and Harris,* 171
Levy, Geschwind, and Li, 187
Harris and Li, 499
Levy and Li, 487
α-, amino acids, *Levy, Geschwind, and Li,* 187
—, carboxypeptidase action, *Harris and Li,* 499

Corticotropin(s)—*continued:*
α-, isolation, pituitary, *Li, Geschwind, Dixon, Levy, and Harris,* 171
—, nitrogen-terminal group reagents, reaction, *Levy and Li,* 487
Cortisol: Metabolism, *Burstein and Dorfman,* 581
Cytochrome: *a,* prosthetic groups, *Morrison and Stotz,* 373
a_3, prosthetic groups, *Morrison and Stotz,* 373

D

Dehydrase: 6-Phosphogluconate. *See* Phosphogluconate dehydrase
Dehydrogenase: Aspartic β-semialdehyde. *See* Aspartic β-semialdehyde dehydrogenase
Formaldehyde. *See* Formaldehyde dehydrogenase
Glutamic. *See* Glutamic dehydrogenase
Homoserine. *See* Homoserine dehydrogenase
Lactic. *See* Lactic dehydrogenase
Malic. *See* Malic dehydrogenase
Dehydroshikimic reductase: 5-, aromatic biosynthesis, relation, *Yaniv and Gilvarg,* 787
Deoxyribonucleic acid: Microorganisms, determination, *Webb and Levy,* 107
Tissues, determination, *Webb and Levy,* 107
Diaminopimelic acid: α,α′-, isolation, *Lactobacillus arabinosus, Ikawa and O'Barr,* 877
Diet: Taurine, sulfur 35-labeled, metabolism, effect, *Portman and Mann,* 733
Taurocholate, sulfur 35-labeled, metabolism, effect, *Portman and Mann,* 733
Diphosphopyridine nucleotide: Neoplasm, determination, *Jedeikin and Weinhouse,* 271
Reduced, oxidase effect, *Huennekens, Basford, and Gabrio,* 951
System, oxidation-reduction potentials, *Rodkey,* 777

E

Egg: Proteins, tissue proteins from, amino acids, relation, *Rupe and Farmer,* 899
Ehrlich: Ascites carcinoma, amino acid incorporation into protein, energy processes, relation, *Rabinovitz, Olson, and Greenberg,* 1
Energy: Processes, amino acid incorporation into protein, Ehrlich ascites carcinoma, relation, *Rabinovitz, Olson, and Greenberg,* 1
Enzyme(s): Blood plasma poly-γ-ethylglutamyl albumin, hydrolysis, *Green and Stahmann,* 259
Carbon dioxide fixation into oxalacetate, mechanism, *Tchen, Loewus, and Vennesland,* 547
— — — — oxalacetate, wheat germ, *Tchen and Vennesland,* 533
α-Chymotrypsin oxidation, *Wood and Balls,* 297
Monosaccharide formation from hyaluronate, *Linker, Meyer, and Weissmann,* 237
Proteus morganii, pantothenic acid and pantethine phosphorylation, *Ward, Brown, and Snell,* 869
System, phenol sulfuric acid esters, synthesis, effect, *De Meio, Wizerkaniuk, and Schreibman,* 439
Thioctic acid removal, *Seaman and Naschke,* 705
Vitamin B_6 analogues, action, *Olivard and Snell,* 203, 215
See also Aconitase, Chymotrypsin, etc.
Ergothioneine: Origin, *in vivo, Melville, Horner, Otken, and Ludwig,* 61
Erythrocyte(s): *See* Blood cell, red
Escherichia coli: Glutathione reductase, *Asnis,* 77
Mutant, serine metabolism, *Meinhart and Simmonds,* 329
Estradiol: *Huffman and Lott,* 343

F

Fat: Metabolism, plants, *Humphreys and Stumpf,* 941
Fatty acid(s): *Agrobacterium tumefaciens, Hofmann and Tausig,* 425

Fatty acid(s)—*continued:*
Oxidation, choline effect, *Artom*, 681
Streptococcus, *Hofmann and Tausig*, 415
Fatty acid oxidase(s): Peanut microsomes, preparation, *Humphreys and Stumpf*, 941
Ferritin: Iron release, *Mazur, Baez, and Shorr*, 147
Formaldehyde dehydrogenase: Glutathione relation, *Strittmatter and Ball*, 445
Formate: Carbon 14-labeled, incorporation into citrovorum factor, *Zakrzewski and Nichol*, 697
Fumarase: Liver, *Shepherd, Li, Mason, and Ziffren*, 405

G

Gelatin: Hydroxylysine isolation, *Hamilton and Anderson*, 249
Glucosamine: Insulin action and, *Wick, Drury, Nakada, Barnet, and Morita*, 907
Glucose: Radioactive, conversion to tryptophan, *Aerobacter aerogenes*, *Rafelson*, 479
Glucuronidase: Urine steroids, hydrolysis, *Engel, Carter, and Fielding*, 99
Glutamic dehydrogenase: Brain, determination, *Strominger and Lowry*, 635
Glutathione: Formaldehyde dehydrogenase, relation, *Strittmatter and Ball*, 445
Reduced, metabolism, blood cells, red, avian, *Dimant, Landsberg, and London*, 769
Glutathione reductase: *Escherichia coli*, *Asnis*, 77
Glutathione synthetase: Action, mechanism, *Snoke and Bloch*, 825
Yeast, isolation and properties, *Snoke*, 813
Glycogen: Regeneration *in vivo*, *Stetten and Stetten*, 723
Glycoside(s): Quercetin, apple skin, *Siegelman*, 647
Growth: Vitamin B_6 analogues, effect, *Olivard and Snell*, 203, 215

H

Hemin(s): Chromatography, partition, *Morrison and Stotz*, 373
Histidine: Assimilation and dissimilation, *Aerobacter aerogenes*, metabolic control, *Magasanik*, 557
Degradation, *Aerobacter aerogenes*, *Magasanik and Bowser*, 571
Homoserine dehydrogenase: *Black and Wright*, 51
Hormone: Thyrotropic. *See* Thyrotropic hormone
Hyaluronate: Monosaccharide formation from, enzymatic, *Linker, Meyer, and Weissmann*, 237
Hydroxylysine: Diastereoisomers, *Hamilton and Anderson*, 249
Isolation, gelatin, *Hamilton and Anderson*. 249
Hydroxyphenylacetic acid: *o*-, excretion, phenylketonuria, *Armstrong, Shaw, and Robinson*, 797
Hydroxysteroid(s): Determination, *Baggett, Engel, and Fielding*, 87
Hypophysis: *See* Pituitary

I

Insulin: Carbohydrate metabolism, liver, effect, *Renold, Hastings, Nesbett, and Ashmore*, 135
Glucosamine effect, *Wick, Drury, Nakada, Barnet, and Morita*, 907
Iodine: Exchange, thyroxine homologues, *Gleason*, 837
Inorganic, labeled, conversion to iodine, organic, labeled, thyroid effect, *Taurog, Potter, and Chaikoff*, 119
Iron: Release, ferritin, *Mazur, Baez, and Shorr*, 147

K

Keto-3-deoxy-6-phosphogluconate aldolase: 2-, *Pseudomonas fluorescens*, purification and properties, *Kovachevich and Wood*, 757
Ketonuria: Phenyl-. *See* Phenylketonuria
Kinase: β-Asparto-. *See* Aspartokinase
Strepto-. *See* Streptokinase

Kynureninase: Action, mechanism, *Longenecker and Snell*, 229

L

Lactic dehydrogenase: Brain, determination, *Strominger and Lowry*, 635
Lactobacillic acid: *Hofmann and Tausig*, 425
Lactobacillus arabinosus: α,α'-Diaminopimelic acid isolation, *Ikawa and O'Barr*, 877
Lactogenic hormone: Isolation, pituitary, *Cole and Li*, 197
Leuconostoc citrovorum: Factor, formate, carbon 14-labeled, incorporation into, *Zakrzewski and Nichol*, 697
Lipide(s): Total, blood serum, determination, *Sperry and Brand*, 69
Liver: Aconitase, *Shepherd, Li, Mason, and Ziffren*, 405
Carbohydrate metabolism, insulin effect, *Renold, Hastings, Nesbett, and Ashmore*, 135
Fumarase, *Shepherd, Li, Mason, and Ziffren*, 405
Phenol-sulfate conjugating system, *Segal*, 161
5′-Uridine nucleotide phosphorylation, *Herbert, Potter, and Takagi*, 923
Lysine: Hydroxy-. *See* Hydroxylysine

M

Malic dehydrogenase: Brain, determination, *Strominger and Lowry*, 635
Methanol: Choline methyl group biosynthesis from, vitamin B_{12} effect, *Verly and Cathey*, 621
Microorganism(s): Deoxyribonucleic acid, determination, *Webb and Levy*, 107
See also Bacillus, Bacteria
Mold: *See also Neurospora*
Monoamino acid(s): Pyruvic acid, carbon 14-labeled, conversion to, yeast, *Wang, Christensen, and Cheldelin*, 365
Monosaccharide(s): Formation, enzymatic, from hyaluronate, *Linker, Meyer, and Weissmann*, 237
Sucrose and cellulose from, wheat seedlings, *Edelman, Ginsburg, and Hassid*, 843

N

Neoplasm: Diphosphopyridine nucleotide, determination, *Jedeikin and Weinhouse*, 271
Metabolism, *Jedeikin and Weinhouse*, 271
See also Carcinoma, Tumor
Neopyrithiamine: *Cerecedo and Eich*, 893
Neurospora crassa: Amino acid biosynthesis, *Abelson and Vogel*, 355
Pyridine nucleotide-hydroxylamine reductase, *Zucker and Nason*, 463
Nitrate: Reduction, *Bacillus subtilis*, ammonia relation, *Hall and MacVicar*, 305
Nitrogen: -Terminal group analysis, *Levy and Li*, 487
Nucleic acid: Deoxyribo-. *See* Deoxyribonucleic acid
Pyrimidines, ureidosuccinic acid as precursor, tumor-bearing mice, *Anderson, Yen, Mandel, and Smith*, 625
Nucleotide(s): Diphosphopyridine. *See* Diphosphopyridine nucleotide
Metabolism, *Herbert, Potter, and Takagi*, 923
Purine. *See* Purine nucleotide
5′-Uridine. *See* Uridine nucleotide
Utilization, *Roll and Weliky*, 509
Weinfeld, Roll, and Brown, 523

O

Oxalacetate: Carbon dioxide fixation into, enzymatic, mechanism, *Tchen, Loewus, and Vennesland*, 547
— — — —, enzymatic, wheat germ, *Tchen and Vennesland*, 533
Oxidase(s): Diphosphopyridine nucleotide, reduced, effect, *Huennekens, Basford, and Gabrio*, 951
Fatty acid. *See* Fatty acid oxidase

Oxonic acid: Uric acid and allantoin oxidation, relation, *Canellakis and Cohen*, 379
Oxyneopyrithiamine: *Cerecedo and Eich*, 893

P

Pantethine: Phosphorylation, *Proteus morganii* enzyme, *Ward, Brown, and Snell*, 869
Pantothenic acid: Conjugates, synthesis and microbiological activity, *Brown, Ikawa, and Snell*, 855
Phosphorylation, *Proteus morganii* enzyme, *Ward, Brown, and Snell*, 869
Peanut: Microsomes, fatty acid oxidases, preparation, *Humphreys and Stumpf*, 941
Peptidase: Carboxy-. *See* Carboxypeptidase
Peroxidase(s): Uric acid oxidation, effect, *Canellakis, Tuttle, and Cohen*, 397
Phenol: -Sulfate conjugating system, liver, *Segal*, 161
Sulfuric acid esters, synthesis, enzyme system effect, *De Meio, Wizerkaniuk, and Schreibman*, 439
Phenylalanine: Requirements, *Armstrong*, 409
Rose, Leach, Coon, and Lambert, 913
Phenylketonuria: *o*-Hydroxyphenylacetic acid excretion, *Armstrong, Shaw, and Robinson*, 797
o-Tyrosine metabolism, *Armstrong and Shaw*, 805
Phosphatase: Alkaline, blood serum, blood serum albumin effect, *Henneman, Rourke, and Jackson*, 19
Phosphogluconate dehydrase: 6-, *Pseudomonas fluorescens*, purification and properties, *Kovachevich and Wood*, 745
Phytomonas tumefaciens: *See also Agrobacterium tumefaciens*
Phytomonic acid: *Hofmann and Tausig*, 425
Pimelic acid: α,α'-Diamino-. *See* Diaminopimelic acid
Pituitary: Anterior, thyrotropic hormone, purification, *Fels, Simpson, and Evans*, 311
α-Corticotropin isolation, *Li, Geschwind, Dixon, Levy, and Harris*, 171
Lactogenic hormone isolation, *Cole and Li*, 197
Plant(s): Fat metabolism, *Humphreys and Stumpf*, 941
Plasminogen: Streptokinase effect, *Troll and Sherry*, 881
Poly-γ-ethylglutamyl albumin: Blood plasma, preparation and hydrolysis, enzymatic, *Green and Stahmann*, 259
Protein(s): Amino acid incorporation into, Ehrlich ascites carcinoma, energy processes, relation, *Rabinovitz, Olson, and Greenberg*, 1
Egg, tissue protein from, amino acids, relation, *Rupe and Farmer*, 899
Proteolysis: Inhibitor, anticoagulant properties, urine and blood plasma, *Shulman*, 655
Proteus morganii: Enzyme, pantothenic acid and pantethine phosphorylation, *Ward, Brown, and Snell*, 869
Pseudomonas fluorescens: Carbohydrate metabolism, *Kovachevich and Wood*, 745, 757
2-Keto-3-deoxy-6-phosphogluconate aldolase, purification and properties, *Kovachevich and Wood*, 757
6-Phosphogluconate dehydrase, purification and properties, *Kovachevich and Wood*, 745
Purine nucleotide(s): Isomeric, carbon 14-labeled, utilization, *Weinfeld, Roll, and Brown*, 523
Nitrogen 15-labeled, utilization, *Roll and Weliky*, 509
Pyridine nucleotide-hydroxylamine reductase: *Neurospora, Zucker and Nason*, 463
Pyrimidine(s): Nucleic acid, ureidosuccinic acid as precursor, tumor-bearing mice, *Anderson, Yen, Mandel, and Smith*, 625

Pyruvic acid: Carbon 14-labeled, conversion to monoamino acids, yeast, *Wang, Christensen, and Cheldelin*, 365

Q

Quercetin: Glycosides, apple skin, *Siegelman*, 647

R

Reductase: 5-Dehydroshikimic. *See* Dehydroshikimic reductase
Glutathione. *See* Glutathione reductase
Pyridine nucleotide-hydroxylamine. *See* Pyridine nucleotide-hydroxylamine reductase
Ribose-5-phosphate: Metabolism, *Azotobacter vinelandii, Mortenson and Wilson*, 713

S

Scurvy: Urine corticosteroids, isolation and determination, *Burstein, Dorfman, and Nadel*, 597
Serine: Choline biosynthesis from, *Elwyn, Weissbach, Henry, and Sprinson*, 281
Metabolism, *Escherichia coli* mutant, *Meinhart and Simmonds*, 329
Steroid(s): Cortico-. *See* Corticosteroids
Hydroxy-. *See* Hydroxysteroid
Metabolism, *Burstein and Dorfman*, 581
Wotiz, Richterich-van Baerle, and Lemon, 969
16-Substituted, *Huffman and Lott*, 343
17-Trioxy-. *See* Trioxysteroid
Urine, glucuronidase hydrolysis, *Engel, Carter, and Fielding*, 99
Streptococcus: Fatty acids, *Hofmann and Tausig*, 415
Streptokinase: Plasminogen, effect, *Troll and Sherry*, 881
Succinic acid: Ureido-. *See* Ureidosuccinic acid
Sucrose: Monosaccharide conversion to, wheat seedlings, *Edelman, Ginsburg, and Hassid*, 843
Synthetase: Glutathione. *See* Glutathione synthetase

T

Taurine: Sulfur 35-labeled, metabolism, diet effect, *Portman and Mann*, 733
Taurocholate: Sulfur 35-labeled, metabolism, diet effect, *Portman and Mann*, 733
Testosterone: Metabolism, blood serum effect, *Wotiz, Richterich-van Baerle, and Lemon*, 969
Thiamine: Analogues, *Cerecedo and Eich*, 893
Neopyri-. *See* Neopyrithiamine
Oxyneopyri-. *See* Oxyneopyrithiamine
Thioctic acid: Removal, enzymes, *Seaman and Naschke*, 705
Thyroid: Cholesterol, radioactive, fate, effect, *Weiss and Marx*, 349
Iodine, inorganic, labeled, conversion to iodine, organic, labeled, effect, *Taurog, Potter, and Chaikoff*, 119
Thyrotropic hormone: Pituitary, anterior, purification, *Fels, Simpson, and Evans*, 311
Thyroxine: Homologues, iodine exchange, *Gleason*, 837
Torulopsis utilis: Amino acid biosynthesis, *Abelson and Vogel*, 355
Trioxysteroid(s): 17-, urine, determination, *Rivoire, Rivoire, and Poujol*, 11
Trypsin: Chymo-. *See* Chymotrypsin
Inhibitors, chymotrypsin, action, *Wu and Laskowski*, 609
Tryptophan: Acetate, radioactive, conversion to, *Aerobacter aerogenes, Rafelson*, 479
Acetyl-D-. *See* Acetyl-D-tryptophan
Acetyl-L-. *See* Acetyl-L-tryptophan
Glucose, radioactive, conversion to, *Aerobacter aerogenes, Rafelson*, 479
Tumor: -Bearing mice, nucleic acid pyrimidines, ureidosuccinic acid as precursor, *Anderson, Yen, Mandel, and Smith*, 625
See also Carcinoma, Neoplasm

Tyrosine: *o-*, metabolism, phenylketonuria, *Armstrong and Shaw*, 805
Requirements, *Armstrong*, 409

U

Ureidosuccinic acid: Nucleic acid pyrimidines, precursor, tumor-bearing mice, *Anderson, Yen, Mandel, and Smith*, 625
Uric acid: Oxidation, oxonic acid and allantoxaidin relation, *Canellakis and Cohen*, 379
—, peroxidases, effect, *Canellakis, Tuttle, and Cohen*, 397
—, uricase effect, *Canellakis and Cohen*, 385
Uricase: Uric acid oxidation, effect, *Canellakis and Cohen*, 385
Uridine nucleotide: 5'-, phosphorylation, liver, *Herbert, Potter, and Takagi*, 923
Urine: Corticosteroids, isolation and determination, scurvy, *Burstein, Dorfman, and Nadel*, 597
Corticosterone metabolites, *Engel, Carter, and Fielding*, 99
Proteolytic inhibitor, anticoagulant properties, *Shulman*, 655
Steroids, glucuronidase hydrolysis, *Engel, Carter, and Fielding*, 99
Urine—*continued:*
17-Trioxysteroids, determination, *Rivoire, Rivoire, and Poujol*, 11

V

Vitamin: B_6 analogues, enzyme action, *Olivard and Snell*, 203, 215
— —, growth effect, *Olivard and Snell*, 203, 215
B_{12}, choline methyl group biosynthesis from methanol, effect, *Verly and Cathey*, 621

W

Wheat: Germ, carbon dioxide fixation into oxalacetate, enzymatic, *Tchen and Vennesland*, 533
Seedlings, monosaccharide conversion to sucrose and cellulose, *Edelman, Ginsburg, and Hassid*, 843

Y

Yeast: Glutathione synthetase, isolation and properties, *Snoke*, 813
Pyruvic acid, carbon 14-labeled, conversion to monoamino acids, *Wang, Christensen, and Cheldelin*, 365
See also Torulopsis

7543
